

Jabra

A MODEL FOR EVERY REQUIREMENT

The Jabra BIZ™ 2400 Series consists of more than 20 models. Each optimized for the particular requirements encountered with specific types of phone systems — both traditional desk phones, softphones and wideband hardphones — with frequency response rates and noise canceling systems appropriate to the kind of work they will be used for.

There are narrowband models for use with conventional desk phones (300–3,400 Hz), wideband models for IP hardphones (150–6,800 Hz), and USB models for softphones and multimedia use (80–16,000 Hz) including a special USB version optimized for use with Microsoft Office Communicator.

Jabra BIZ™ 2400 is available in both mono and duo speaker configurations with a wide selection of high quality microphone types and noise-canceling systems to match the acoustic profiles in particular kinds of work surroundings.

This versatility makes Jabra BIZ™ 2400 headsets ideal for all kinds of phone systems and work environments — right from quiet individual offices to noisy open plan contact centers.

10X

BETTER

Jabra BIZ™ 2400

RAISING THE BAR ON CORDED HEADSET QUALITY AND PERFORMANCE

The new Jabra BIZ™ 2400 Series from GN Netcom takes corded headset technology to the next level. Building on our award-winning portfolio this new headset gives users all the premium benefits from GN Netcom's market-leader experience. We know exactly what's important for professional users.

The Jabra BIZ™ 2400 Series provides a cascade of corded headset improvements in a high-end solution that pushes the envelope for the levels of audio, build and comfort available for dealing within the special requirements in contact center and office environments.

The result is now here —10x BETTER

BETTER AUDIO

- 1 - Superior audio with Neodymium speakers
- 2 - Gold contacts for crystal-clear voice transmission
- 3 - Improved noise-cancellation with Jabra PureVoice technology

We've done everything possible to improve the sound quality in both the earphones and the microphones in the Jabra BIZ™ 2400 headset. The Jabra BIZ™ 2400 range includes special versions for virtually all different kinds of phone systems, with frequency responses from as low as 80 Hz way up to 16,000 Hz.

The new Neodymium speakers and noise-canceling microphones provide even better frequency response within these ranges, resulting in greater call clarity. A new and even more flexible break-proof boom arm lets users position the microphone in the ideal spot for top quality voice pick-up.

The new microphone design features gold contacts for near perfect signal transport. Our new PureVoice noise-canceling system eliminates undesirable background noise with even greater precision. The comprehensive range of different microphone types helps users put their message across better — even in the busiest of contact centers.

BETTER BUILD

- 4 - Patented FreeSpin boom prevents breakage by allowing 360° non-stop rotation
- 5 - Key parts in surgical steel for maximum strength
- 6 - Ultra-strong Kevlar®-reinforced cord

The patented FreeSpin microphone boom is virtually break-proof and stays in position no matter how users treat it. The new design allows users to turn the boom through more than 360 degrees — eliminating this traditional source of boom damage and breakages.

We've used surgical steel both for strength and to provide attractive high-quality metal details. The special cord on all Jabra BIZ™ 2400 models is reinforced with ultra-strong Kevlar®. This prevents it from kinking, breaking or getting damaged in any other way — essential for the, sometimes rough, treatment in professional contact center and office environments.

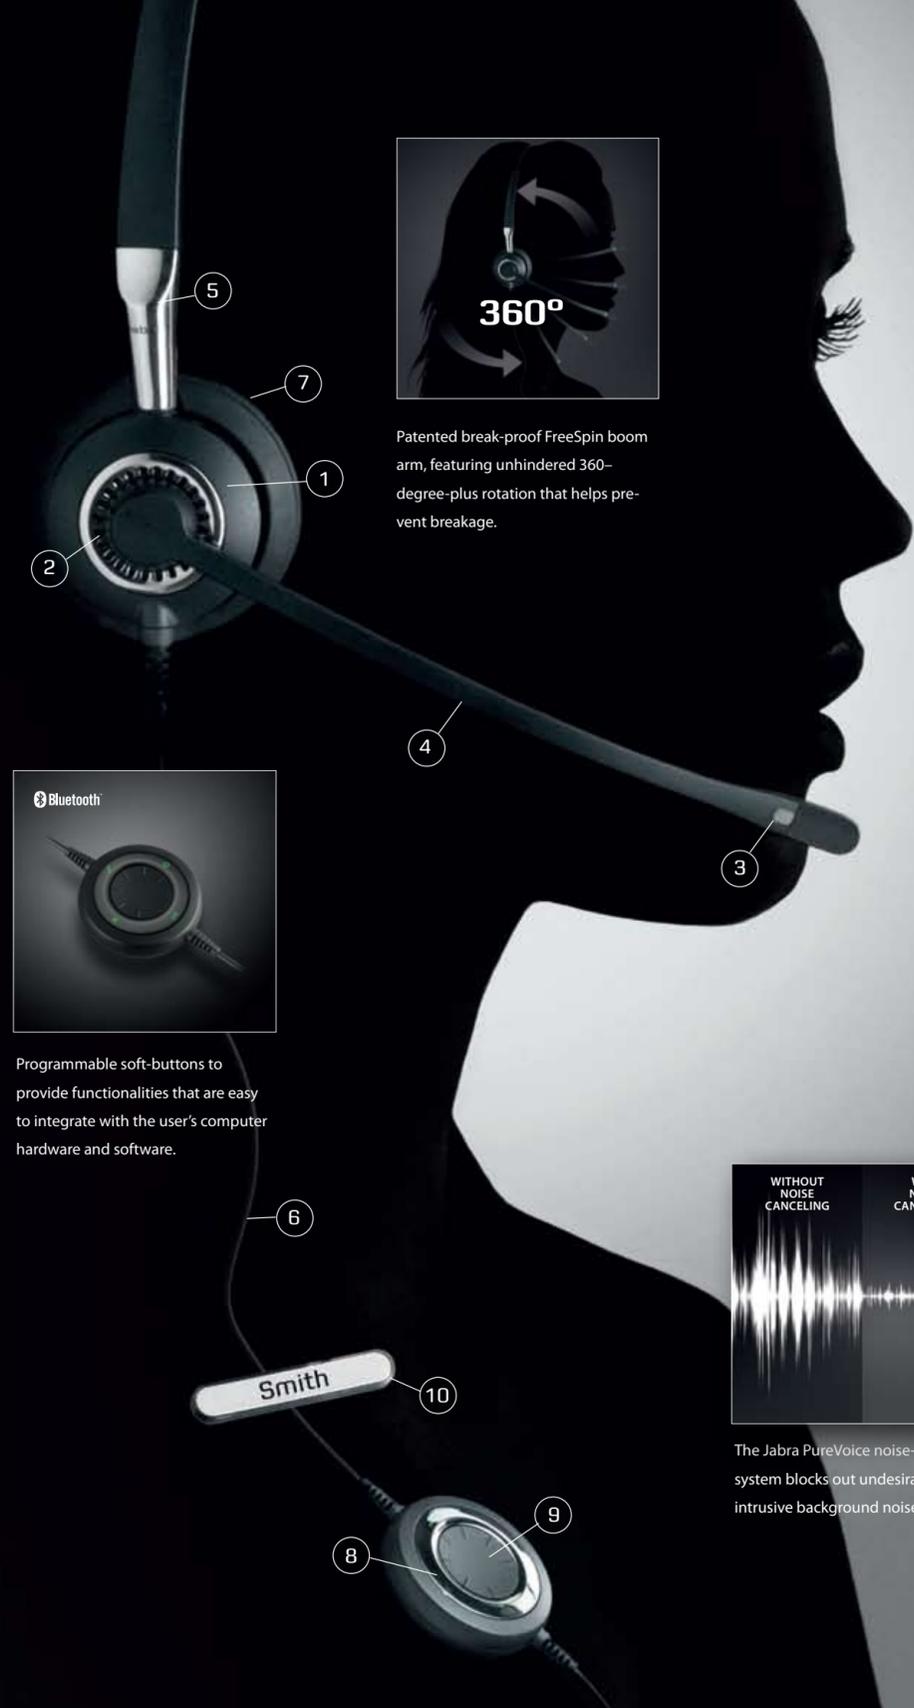

BETTER COMFORT

- 7 - Supersoft ear cushions and FlexFit wearing styles
- 8 - Programmable soft-buttons
- 9 - Bluetooth® connection for mobile phones
- 10 - Clothing clip with ID tag

To boost wearing comfort still further, we've used a new, softer material for the ear cushions — the kind often used in high-end stereo headsets.

The USB version features GN Netcom Multiuse technology that lets users switch easily between softphone calls and calls on their Bluetooth®-equipped mobile phone. Users can program the toggle button to carry out pre-defined tasks, such as "answer mobile phone call" or "speak mute".

The Jabra BIZ™ 2400 provides 3 inter-changeable mono wearing styles — headband, neckband, and a patented earhook — all of which can be used with the headset on either right or left ear. The GN Netcom FlexFit system makes it easy to swap between the different wearing styles.

Patented break-proof FreeSpin boom arm, featuring unhindered 360-degree-plus rotation that helps prevent breakage.

Programmable soft-buttons to provide functionalities that are easy to integrate with the user's computer hardware and software.

The Jabra PureVoice noise-canceling system blocks out undesirable and intrusive background noise
